Doors lock automatically when vehicle reaches 8 mph. Smooth ride, good Transmission is very quiet and smooth. I put it through hell for the year and a half that I had it. It was definitely worth the 600 I paid for it. It was meant to be a temporary car but I fell in love. The lumina never failed to start throughout the entire first Maine winter I put it through, though the doors did have a tendency to freeze open, but as soon as the car warmed up they thawed and I could shut them properly. I lived in this car for the summer of 2008 and the bench seats are like sleeping on a couch. I've seriously never been in a more comfortable car. I've never had a major problem with this car, always routine maintenance done a little too late. Had the car for almost two years and she's in rough shape, but I've put her through hell. I love my lumina and highly recommend. Interior is still fresh and firm. Other than the notorious GM brake Radiator went at 140k rust related. Battery went at 150k. Stuts at 90k. Ask most people and they'll probably tell you. And from a financial perspective, it's true, provided you're willing to make a lease. Leasing, on the other hand, it's also good if you're someone who likes to drive a. For the minivan, see Chevrolet Lumina APV. For other uses, see Chevrolet Lumina disambiguation. Introduced to consolidate the Chevrolet midsize nameplates under a single product range, five different generations of the Lumina were produced. The first two generations were sold nearly exclusively in North America, with successive versions sold in other markets worldwide. For the 2000 model year, the Lumina was replaced by the Chevrolet Impala; the model line would retain the W platform through the 2016 model year. For markets outside of North America, the Chevrolet Lumina was derived from other large GM sedans. In one sequence, advertising the car's spacious interior, cartoon hippopotami were used to demonstrate the Lumina's wider rear door swings which Chevrolet claimed made for easier access to the rear seat area. While popular, the ads were soon cancelled when focus groups revealed that they remembered the Disney characters better than they remembered the car itself. It came standard with the FE3 sport suspension package, the 210 hp LQ1 V6 engine shared with the Lumina Euro 3.4 sedan, the five-speed Getrag 284 manual transmission, dual exhaust, and four-wheel antilock brakes. The only paint colors available for the Z34 were white, red, black, gray, silver, and light blue. In 1995, the Lumina Z34 was replaced with the Chevrolet Monte Carlo Z34. By 1991, a final body design was approved. Development eventually took longer than planned, delaying launch by 18 months. The redesigned Lumina was unveiled at the Los Angeles Auto Show in January 1994 as a 1995 model. The 1995 Lumina received a rounded body, increasing its size, as well as an updated interior. Unlike its other W platform counterparts, the Lumina retained the first-generation chassis.

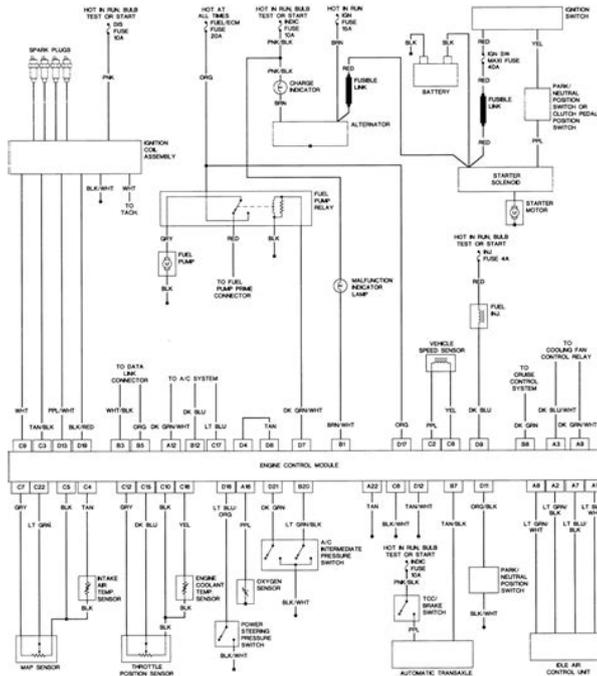

Replacing the Lumina two-door coupe was the resurrected Monte Carlo. This Lumina was also sold with police code 9C3 and taxi packages, because the Chevrolet Caprice was discontinued after the 1996 model year. The front-wheel drive Chevrolet Impala was introduced as a replacement for the Lumina in 2000, although GM produced 2001 model year Lumina's to be exclusively sold for rental fleets. Retail sales of the Lumina ended in Canada in 1999, with the United States following a year later. Fleet production ended on April 26, 2001. Base models were equipped with fifteen-inch steel wheels with wheel covers. A center console was standard on LTZ optional on LS. Exterior differentiation included the front end, trunk lid, and taillights from the Fifth Generation Chevrolet Monte Carlo. Please help improve this section by adding citations to reliable sources. Luxury specifications of these sedans were also exported in Brazil as the Chevrolet Omega. GM had withdrawn from the Philippines in 1985 along with Ford, finding the political and economic situation there at the time was untenable. This left just Nissan, Toyota and Mitsubishi operating in the Filipino market. In 1997, GM returned with the Opel brand, and introduced the Opel Vectra, Opel Omega and, shortly thereafter, the Opel Tigra and Opel Astra. In 2000, Chevrolet returned with the Chevrolet Suburban and GMC Savana, and GM dealerships were branded as GM AutoWorld. But Opel struggled in the Filipino market and by 2000 the market was still dominated by Japanese automakers who accounted for 80% of the total market. Koreans were the next biggest players with 15%. The Vectra struggled against rivals like the Nissan Cefiro, Honda Accord and Toyota Camry. GM withdrew the brand in 2003, leaving the corporation without a car in the midsize segment. In case of accidents, five seatbelts two for the front passengers, three for the rear and front dual airbags restrain passengers from slamming towards the dashboard.

To reinforce cabin protection, the Lumina body features an integrated steel body structure with impact protection and GMs proprietary Safety Steel FourDoor Beams. To prevent theft, the Lumina features an engine immobilizer and a central locking system. Its main features consists of keyless entry, its eightway power adjustable drivers seat, its remote trunk opener and powerassisted dashboard gauge clusterlevel side mirror adjuster. The steering wheel features a leatherwrapped steering wheel with a tiltadjustable steering column and hydraulic power steering. This made it the largest car in its class, larger and wider than its main competitors, the Honda Accord and the Toyota Camry. The car was praised for being comfortable, spacious and wellequipped. China ceased production of the Regal in 2008 and so the Chevrolet Lumina was discontinued from the Filipino market in 2006, leaving GM again without a midsize sedan. Sales were poor, making the Lumina a very rare car in the Philippines. ISSN 03624331. Retrieved 20160129. Retrieved 20160129. Los Angeles Times. Not only do they sound amazing at idle, but the further you push your foot down on the gas pedal, the better they sound. Although this upgrade remains popular, because of the noise a tuned exhaust header creates, there is actually a scientific reason to go for this aftermarket upgrade. If we relate both of these upgrades to how an athlete performs we can better understand why we'll see a big boost in horsepower. The intake manifold represents the inhalation of oxygen for a human being. The exhaust manifold represents the exhale, but more importantly, the ability to expel all of the air from the lungs. This allows us to take in the maximum amount of oxygen on the next inhale. Imperfections in the casting slowed down the intake of air and fuel. In the same way the sharp bends and rough inside castings of a standard exhaust manifold reduce the flow of exhaust. If we only increase the ability for the intake to pull in more air and fuel, without increasing flow on the exhaust side we don't reap all of the benefits. So let's talk about a few reasons to upgrade the exhaust headers. On a classic muscle car era automobile you'll find a compact part with 90 turns and ports that share the task of removing exhaust fumes from multiple cylinders. These exhaust manifolds are so inefficient that it actually creates back pressure in the combustion chamber. In other words, exhaust gases don't flow out fast enough to empty the cylinder. In turn, this restriction of exhaust flow robs the engine of generating its full ability to produce horsepower and torque. When using an aftermarket exhaust header you find dedicated tubes for each cylinder. In addition, you find that the surfaces inside are highly polished. Instead the exhaust takes a long flowing turn that enhances the ability to remove exhaust gases from the combustion chamber. This improves the volumetric efficiency of the engine.

Therefore, we can say highperformance exhaust headers provide enhanced efficiency, because of the large diameter tubing, long flowing bends and polished inside surfaces to reduce drag and back pressure. The factory installed these compact manifolds because they didn't have the room in the engine compartment. With that said, they also didn't see it as the best way to increase horsepower at the time. Nevertheless, installing aftermarket headers on some classic muscle cars presents major challenges. I installed a pair of Lakewood performance exhaust headers on a friend's Dodge Charger RT. Long story short, the header installation on the big block 440 cubic inch engine became a nightmare. We purchased model specific parts from a reputable Mopar specialist that designed the headers specifically for the Dodge Charger application. In addition, interference with the upper control arms and the tie rods became another issue. After we completed the installation the true problems began to surface. In order to clear some suspension parts the driver side header becomes the lowest part under the automobile. After going over a few speed bumps the tubes that carried exhaust gases from the front cylinders became completely smashed closed. Instead of increasing efficiency the end result became exactly the opposite. In fact, you can even find an article about nitrous oxide upgrades you can put in the trunk to provide the boost you're looking for. But no matter where we decide to boost performance, deciding to upgrade the exhaust headers maximizes the benefits of all the other alterations. I'm talking about cars like the Chevrolet Malibu Super Sport and the Ford Mustang pony cars. These automobiles utilized some of the most inefficient exhaust

manifolds ever created by man. It's not that the original designers of these engines did not understand volumetric efficiency, they just approached the horsepower wars in a different way.

They decided to increase combustion ratios and cubic inches to achieve the desired performance level. Of course, they also had leaded fuel available to them at the time. This forced them in the direction of improving the intake and exhaust cycles on modern automobiles. Therefore, the general rule of thumb becomes the newer the automobile the less performance gains you'll find from upgrading the intake and exhaust manifolds. Why? It's because the automotive manufacturers upgrade the exhaust headers on their own. They also do a good job on the intake side of manufacturing efficient cold air intakes and intake plenums installed on the assembly line. Read this article on how to unlock a Chevy truck without keys of course. You'll be back in your car in no time. It happens to everyone at least once. You could break a window, but then you'd have to buy a new one and that sounds a little expensive. Keep in mind, the age of your truck will determine how easy this feat will be. Newer vehicles with automatic locks are typically quite a bit harder. The downside is that you have to have door locks that stick up in order for this trick to work. If your truck has this type of lock, you're in luck. Give this trick a try. This is a type of knot that you can tighten by simply pulling on the ends of the string. It'll probably be a tight fit but you should be able to get the string in there. Most seals give enough to allow for enough space. Once it has a firm grip pull up and the door should unlock. Easy peasy! I bet you didn't know you could unlock a car door with a string! But, you have to have a certain type of door handle for this trick to work. If your truck is newer, it probably won't work. You have to be able to reach the lock mechanism through the door handle and newer trucks aren't that easy. Remove your antenna and insert one end into the door through the handle. Once it feels like you're making a solid connection, push the antenna forward and the door should unlock.

Instead of having to buy a specially made Slim Jim, you can use a coat hanger. This technique often works on trucks with manual locks. You're going to slide the coat hanger down into the door on the outside of your window. The point is to find the control arm, grab it with the hook, and pull it up to unlock the door. It might take a few tries to find the arm, but once you've got it, you're in! If you think you'll be locking your keys in the car a lot, it may be a good idea to invest in a wedge set. Once you get a big enough crack you can insert an air wedge and pump it full of air to widen the crack even more. We've mentioned the antenna, but that only works in short spaces. The antenna will just telescope down if you try to push on your door locks after having slipped it in the door crack. It's pretty easy to remove the windshield wipers from most vehicles without special tools and you can always count on it to be on hand! And with good reason. You can easily damage the door, especially if you end up doing it a few times. Make sure you get a set that is compatible with your make and model of car. The great thing about this method is that it doesn't cause damage to the door. You'll also need a special automotive torsion wrench for this method. This is what professionals typically use anyway to get into your car. The good thing is that you can get into your vehicle without spending a bundle. The bad thing is that so can someone else. You might think twice about parking it on the questionable sidestreet now. Just be sure to wedge it in a spot where it won't be easily found or fall off when driving. Get the lowdown here! Here are the 7 best muscle cars of all time. So sit back and start your engines! It looks just as great on the road if not more now than it did in its release. Interest has spiked in recent years thanks to hit television show *Supernatural*. These cars were built to last and many owners have watched their Impalas stand the test of time.

Time may have brought new design and premium manufacturing, but nothing will pack the same punch as a classic muscle car. In 1967 you could choose from a variety of makes and models including hardtop, convertible, and sports coupe. Plymouth delivered. Plymouth incorporated 425 horsepower Hemi V8 engine that made their car popular on the racetrack. Available with versions of the V8 engine, this car could reach an apex of 450 horsepower. Year after year found success for

Plymouth Road Runners but in 1970 they found another hotshot. We cover both modern cars and classic cars on this list, so it's the best of both worlds. Click here now!
